OPERATING INSTRUCTIONS

Temperature Control

The deep freezer features an adjustable thermostat, typically located on the front or side of the unit. You can set the desired temperature within a range of -26 to +6 degrees Celsius. Turn the dial or adjust the control to your preferred setting. Lower numbers or settings usually correspond to colder temperatures.

Convertible Mode

This appliance offers a convertible mode, allowing it to function as either a deep freezer or a cooler. Refer to the specific markings on the temperature control dial or the user interface for instructions on how to switch between these modes. Ensure the appliance has reached the desired temperature for the selected mode before storing temperature-sensitive items.

MAINTENANCE

Regular Cleaning

- **Exterior:** Wipe the exterior surfaces with a soft cloth dampened with mild detergent and water. Dry thoroughly.
- **Interior:** Clean the interior with a solution of baking soda and warm water (1 tablespoon baking soda to 1 liter of water). Rinse with clean water and dry thoroughly to prevent odors.
- Always unplug the appliance before cleaning.

Defrosting

As a static cooling deep freezer, frost will accumulate over time. Defrost the unit when the frost layer reaches approximately 0.5 cm (1/4 inch) thickness to maintain efficiency.

1. Unplug the freezer from the power outlet.
2. Remove all food items and store them in another freezer or cooler.
3. Leave the lid open to allow the frost to melt naturally. You can place towels at the bottom to absorb water.
4. Use the provided ice-scraper to gently remove ice, avoiding sharp objects that could damage the interior.
5. Once defrosted, clean and dry the interior thoroughly before plugging it back in and returning food items.

Gasket Maintenance

Regularly clean the anti-bacterial door gasket with a damp cloth to ensure a tight seal and prevent mold or mildew growth. A clean gasket helps maintain cooling efficiency.

TROUBLESHOOTING

If you encounter any issues with your deep freezer, refer to the following common problems and solutions:

- **Appliance does not operate:** Check if the power cord is securely plugged in. Verify if the circuit breaker has tripped. Ensure the temperature control is not set to 'Off'.
- **Temperature is not cold enough:** Check if the temperature setting is too high. Ensure the lid is closed properly. Avoid frequent opening of the lid. Verify that the appliance is not overloaded with warm food. Check for proper ventilation around the unit.
- **Excessive noise:** Ensure the appliance is on a level surface. Check if any parts are loose or

vibrating.

- **Lid does not close properly:** Check if the gasket is clean and free from obstructions. Ensure the appliance is level.
- **Frost buildup is excessive:** This is normal for static cooling units. Defrost the unit as per the maintenance instructions.

If the problem persists after checking these points, please contact customer support.
